

Simple And Secure: The Portal That Connects You

INSYS Connectivity

VPN service for M2M applications

INSYS Connectivity Service

Simple. Secure. VPN.

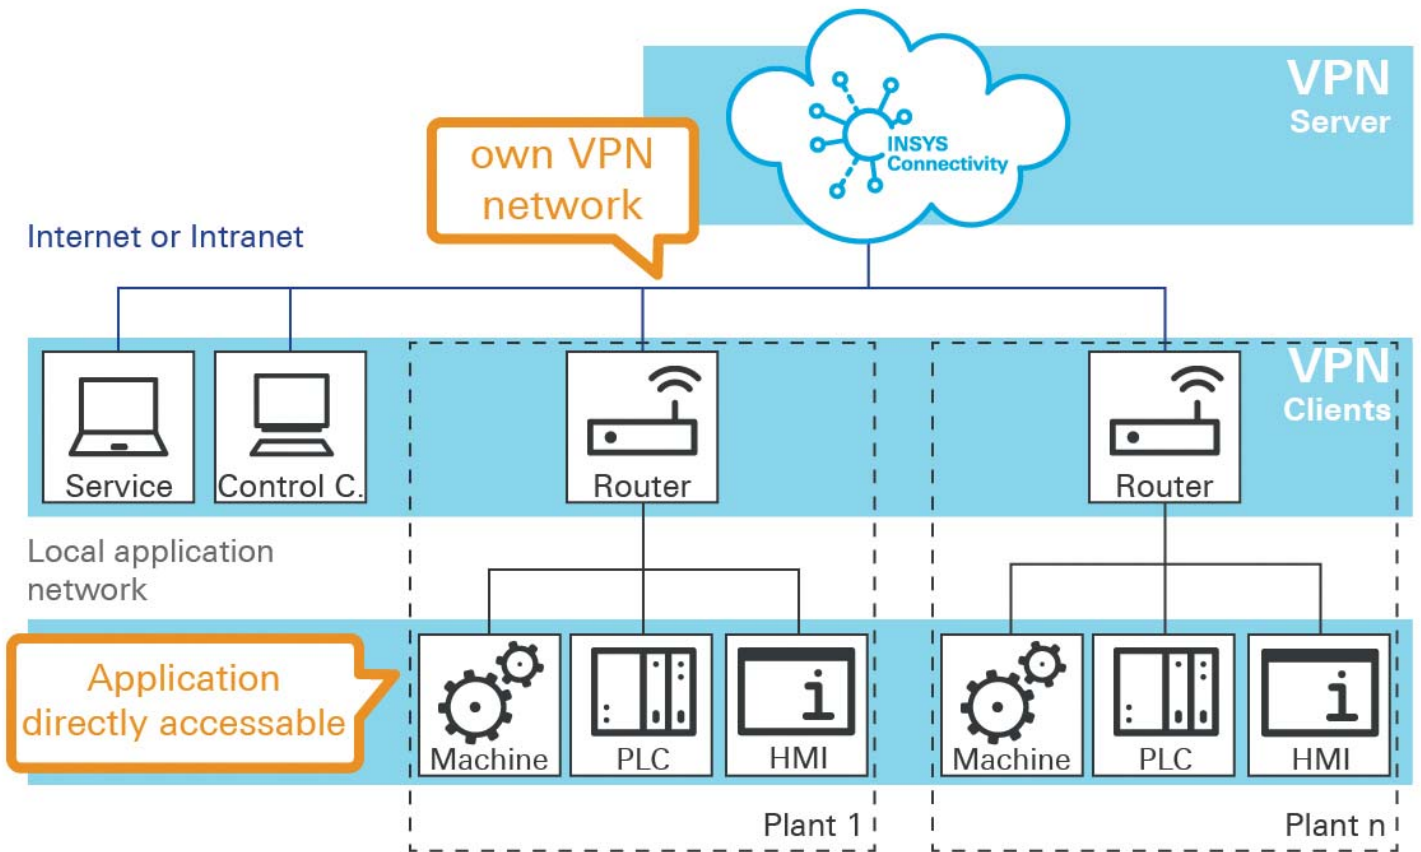

Make your own personal VPN. You'll integrate PCs, routers and locally connected network devices (e.g. controls, measuring devices, web cams) via an easy to use online portal. Your routers and devices can be accessed across all networks and addressed at any time with this. This even applies to standard machines with identical addresses.

Configuration files and security certificates will be generated and renewed automatically. Devices of INSYS icom obtain all necessary information automatically using a secure quick start.

You'll always know the condition of your network with the new monitoring function.

Arrange the devices in groups and control the communication within and between these groups using simple rules.

And now the best: You'll have your VPN under complete control with the INSYS Connectivity Service - with minimum investment cost. It couldn't be simpler and more comfortable!

The Professional VPN Service for M2M Applications

- Safe VPN without much effort
- Service with highest-possible safety and scalability
- Direct routing up to the individual control, web cam, etc.
- Free selection of IP addresses
- Easy group formation and connection control
- Automatic configuration of INSYS icom routers
- Automatic generation, management and exchange of certificates

Latest Included Functions:

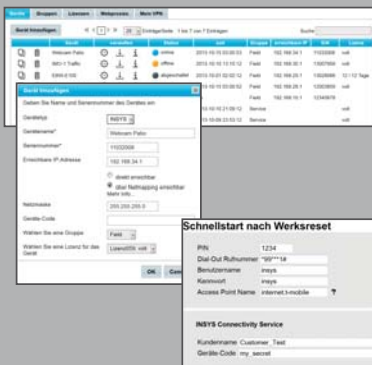

- Monitoring
 - Automatic check of availability of IP devices, VPN tunnels and web servers
 - User-specific configurable alarm messages
- Web proxy
 - Direct link for external access to browser-based interface in VPN
 - Backup via https

NEW

Security in the Cloud?

Aren't security and a cloud service mutually exclusive? No!

The INSYS Connectivity Service provides security by a robust installation in the data processing center and transports application data without storing it.

It's so Easy:

Enter in the portal under <https://connectivity.insys-icom.de> another INSYS icom router or fault monitor.

Enter your customer name and the device code in the device quick start. Everything else will be done by the router itself.

Supported Devices:

INSYS Connectivity Service is suitable for all OpenVPN-capable routers and devices. It supports all routers and fault monitors of INSYS icom in particular.

Authorised INSYS icom distributor:

Your expert for industrial data communication and M2M technology

INSYS icom is a well-proven technology partner for industrial data communication and M2M technology since 1992. The range of products ranges from serial modems up to integrated routers, control devices for electric mobility charging stations and complete energy management solutions.

INSYS icom serves customers of a wide variety of industries, like energy, machine and plant engineering or traffic engineering. But also system integrators, automation companies and the public sector use the professional products and solutions for applications, like remote maintenance and access, IT integration, alarming or monitoring.

INSYS icom communication devices are available in various form factors for all transmission technologies and in many equipment variants. Intelligent functions, like a Linux sandbox for user-specific applications that is available in many devices, suitable sandbox apps or the INSYS Connectivity Service for managing secure VPN networks facilitate many further possible applications.

The own technical support that is appreciated by many customers is available individually and with expertise at any time. Many years of development expertise are the reason why INSYS icom is the preferred partner for individual solution demands or modification needs in questions of hardware, software, application and technology.
